

## Sleep Technologist

Part-time (20 hours per week – nights and days)

An opportunity has arisen for a highly motivated healthcare professional to join our experienced team.

Situated in a prime location in the heart of Edinburgh, The Edinburgh Sleep Centre is a highly resourced, 2-bedded, private sleep centre, using proven technology to diagnose and treat sleep disorders. As well as our clinical practice, the Centre is involved in a range of research and clinical trial work.

Working closely with technical, medical and administrative staff, you will ensure patient confidentiality, comfort and safety at all times.

You will be responsible for the set-up and monitoring of overnight polysomnography, and daytime tests such as the MSLT and MWT, and assist in manual scoring and reporting of these studies.

You will set-up and download diagnostic equipment, such as home respiratory screeners and actigraphs, and instruct patients in use of this equipment. You will be involved in set-up and download of CPAP units, assisting in CPAP education and mask fitting.

You will be expected to work one 12-hour night shift and one 8-hour day shift per week, although this may vary as required. The flexibility of this post makes it an excellent opportunity, fitting in around other home and employment commitments.

Applicants should be educated to degree level in physiology, life sciences, psychology or similar. Previous experience working with patients in a healthcare setting is desirable.

Applications from RPSGT or RCCP-registered technologists and experienced sleep or EEG technologists are especially welcome, although training is available for the right candidate if required.

Salary:	Dependent on experience
Application by:	CV & covering letter
Closing date:	Friday 15 February 2008
